Z890-KC

7 [178] WIDE REVEAL TRENCH DRAIN SYSTEM WITH SEEPAGE PAN AND CLAMP COLLAR

Dimensional data (inches and [mm]) are subject to manufacturing tolerances and change without notice.

Z890-KC SANI-FLO TRENCH SYSTEM

The Z890-KC Sani-Flo trench drain system is typically installed in above grade applications where the trench drain needs to be watertight and also needs to seal a waterproofing membrane to the trench. The channel is typically set in place and anchored using the leveling feet provided with the product. Next, the structural pour is made up to the clamping flange. Then, the waterproofing should be laid and secured to the clamping flange using the clamping collar and hardware (provided by others). Finally, the topping slab should be poured to the finished surface.

* All concrete to be set per local concrete practices. Any rebar configuration would be determined per structural engineer (Not shown).
